Information is subject to change without notice. Northern Telecom reserves the right to make changes in design or components as progress in engineering and manufacturing may warrant. This equipment has been tested and found to comply with the limits for a Class A digital device pursuant to Part 15 of the FCC rules.

Revision history

August 10, 1990

Standard, release 1.0. Reissued for compliance with Northern Telecom standard 164.0.

December 1, 1991

Standard, release 2.0. Reissued to include technical content updates. Due to the extent of the changes, revision bars are not used.

December 1994

Standard, release 3.0. Reissued to include editorial changes and indexing. Due to the extent of the changes, revision bars are not used.

Contents

Engineer a telephone line	1
Select a loop	11
Calculate DC loop resistance	13
Perform loop diagnostic tests	15
Testing foreign voltage	15
Testing insulation resistance	15
Testing DC continuity	16
Testing capacitance unbalance	16
Measure impulse noise	17
Measure background noise	19
Calculate expected pulse loss	21
Example of applying Procedure 6	22
Measure DC loop resistance	25

List of figures

Figure 1	
Engineer a telephone line	2
Figure 2	
Maximum allowable impulse noise counts versus loop loss	18
Figure 3	
Junction loss versus cable characteristic impedance	24

List of tables

Table 1	
Conductor resistance per unit	13
Table 2	
Cable attenuation at 256 kHz and 21.1 degrees C (70 degrees F)	23
Table 3	
Attenuation at 256 kHz for U/C cable	23
Table 4	
Attenuation at 256 kHz for D inside wiring cable	23
